Mobile WiFi 4G Lte

① Insert card

② Power on

③ Input Wi-Fi KEY

④ Connect Internet

NOTE:

1. Mobile WiFi is designed to conserve power whenever possible. It will turn off Wi-Fi and enter sleep mode if no device is connected to it after it has been on for 10 minutes. Simply touch the power button to wake it back up.
2. If you forget the Wi-Fi SSID, password, or web management page login password, press and hold the reset button until Mobile WiFi restarts. The Mobile WiFi settings are then restored to their default values.
3. The default SSID and encryption key are printed on the Mobile WiFi.
